# Your road to success in Maine!

## Just some of the reasons to build an MDF or particle board mill in Maine:

- A world class labor force.
- 16 million acres of privately owned forestland with landowners who want to cut wood – no federal red tape!
- For the next 20 years, Maine's forests will sustainably produce three million tons per year of currently unutilized spruce and fir fiber.
- The University of Maine has one of the top research laboratories in the world for forest products, including nanocellulose.
- The average wildfire in Maine is less than one acre. Wildfires are attacked quickly and kept small. In 2019, Maine was 45th of 50 states with only 142 acres burned.
- "The Way Life Should Be" – Maine is an absolutely beautiful place to live and a great place to run a business.
